EXPLANATORY NOTES

1. **Source of data:** Import statistics are compiled from information appearing on customs import entries and invoices, except for data on electricity. Electricity imports are reported directly by the importing firms to the Dominion Bureau of Statistics.
2. **Coverage:** From January 1, 1964 import statistics include all goods cleared by Customs immediately on arrival in Canada, plus goods which are entered into customs warehouses on arrival. For 1963 and earlier years import statistics include goods cleared immediately on arrival plus goods cleared for consumption out of customs warehouses. The two types of record eventually cover the same totals, except for a small amount of goods which is entered into customs warehouses and then re-exported. There may, however, be an important difference in the time at which warehoused goods are recorded as imports; some shipments which enter customs warehouses remain there for several months before clearance. A more detailed discussion of this change appears on pages under the title "New Basis of Compiling Trade Statistics", and under "Changes in Coverage of Commodity Statistics".

Both in 1964 and in earlier years, import statistics excluded the following commodity movements (some of these are recorded separately as Special Transactions — Non-trade in Table 3 of this report): gold and gold products where the value of the gold content is 80 per cent or more of the total value (a small amount of gold scrap in the form of jewellers' sweepings is included in class 258-99); current coin; settlers' effects; private donations and gifts; tourist purchases exempt from duty; goods imported by foreign armed forces or diplomats stationed in Canada (or brought back by Canadian armed forces or diplomats returning from postings outside Canada); temporary imports for exhibition or competition (and film imported for exhibition or processing or returned after exhibition or processing abroad); ships of British construction or registry imported for use in Canada, and ships and aircraft purchased as international carriers but not used to carry goods between points in Canada, bunker supplies and ships' stores purchased by Canadian vessels or aircraft abroad; generally, all temporary imports and goods merely moving in transit through Canadian territory.

3. **Countries credited:** Imports are credited to the country in which the goods were located when first directed to Canada, except for goods produced in Central or South America and Antilles but first consigned to Canada from the United States, which are credited to the country of origin.
4. **Quantities:** Units of quantities used in this report are those specified for each class in the Import Commodity Classification, Vol. I, (DBS Catalogue No. 12-524). Where no unit of quantity is specified, a small dash appears in the quantity columns. Units of weight or volume relate to the weight or volume of the goods, and exclude the weight or volume of any packing required for shipment except in certain cases otherwise defined in the Customs Tariff. Units of number refer to the number of complete (or substantially complete) units imported, excluding parts (for any class where the recorded value includes both complete units and parts of these units, the average value per complete unit cannot be calculated). All units of quantity used in Canadian import statistics are defined on page under "Abbreviations, Definitions and Units of Quantity". In converting the old classes to the framework of the new Import Commodity Classification quantity conversion factors had to be applied in many cases to meet quantity specification for particular classes. However, when prorations of values were found necessary, quantities were deleted; in other cases, where two or more classes with mixed units of quantities, were converted to a single class the quantities were also omitted.

NOTES EXPLICATIVES

1. **Source des données:** La statistique des importations est tirée de renseignements qui paraissent dans les déclarations et les factures de douane, sauf dans le cas des importations de l'électricité. Les importations de l'électricité sont déclarées directement par les compagnies importatrices au Bureau fédéral de la statistique.
2. **Couverture:** La statistique des importations comprend depuis le 1^{er} janvier 1964, toutes les marchandises dédouanées dès leur arrivée au Canada plus les marchandises entreposées à la douane à leur arrivée. Pour 1963 et les années antérieures, la statistique des importations comprend les marchandises dédouanées dès leur arrivée plus les marchandises dédouanées des entrepôts de la douane pour consommation. Éventuellement les deux formes de documents donnent les mêmes chiffres, sauf dans le cas d'une petite quantité de marchandises entreposées à la douane et ensuite réexportées. Il peut y avoir, toutefois, une grande différence entre le moment où les marchandises sont entreposées et celui où elles sont consignées comme importations; certaines marchandises entreposées à la douane attendent leur dédouanement pendant plusieurs mois. Une description plus détaillée du changement paraît sur les pages sous le titre "Nouvelle base de la statistique du commerce" et également sous la rubrique "Modifications apportées à la couverture statistique de marchandises".

Pour 1964 et pour les années antérieures la statistique des importations ne comprend pas les mouvements de marchandises suivants (certains sont classés séparément comme transactions spéciales — hors commerce au Tableau 3 du présent rapport): l'or et les articles en or dont la valeur de la teneur en or représente 80 p. 100 ou plus de la valeur totale (une petite quantité de déchets d'or sous forme de balayures de bijoutiers est comprise dans la classe 258-99); la monnaie courante; les effets d'immigrants; les dons et cadeaux privés; les achats des touristes exempts de douane; les marchandises importées par les forces armées ou les diplomates étrangers en service au Canada (ou rapportées par les forces armées ou les diplomates canadiens rentrant de leur service hors du Canada); les importations provisoires pour expositions ou concours (et les films importés pour projection ou développement ou retournés à l'étranger après projection ou développement; les navires de construction et d'immatriculation britanniques importés pour usage au Canada, et les navires et les avions achetés pour usage comme transporteurs internationaux et non pour le transport de marchandises d'un endroit à un autre au Canada, les approvisionnements de soute et de bord achetés à l'étranger par les navires ou aéronefs canadiens; en général, toutes les importations provisoires et les marchandises ne faisant que passer par le territoire canadien.

3. **Pays de provenance:** Les importations sont créditées au pays où les marchandises étaient situées avant leur acheminement vers le Canada, sauf les marchandises produites en Amérique centrale, en Amérique du Sud et aux Antilles et expédiées au Canada des États-Unis, lesquelles sont attribuées au pays d'origine.
4. **Quantités:** Les unités de quantités employées dans le présent rapport sont celles déterminées pour chaque classe dans la "Classification des Marchandises d'Importation", Vol. I (B.F.S. numéro de catalogue 12-524). Lorsque l'unité de quantité n'est pas requise, un petit tiret s'inscrit dans les colonnes de la quantité. Les unités de poids ou de volume visent le poids ou le volume des marchandises à l'exclusion de l'emballage nécessaire à l'expédition, sauf dans certains cas spéciaux définis dans le Tarif douanier. Les unités de nombre visent le nombre d'articles complets (ou suffisamment complets) importés, sauf les pièces de rechange (dans toute catégorie où la valeur inscrite comprend les unités complètes et leurs pièces, la valeur moyenne par unité complète ne peut être calculée). Toutes les unités employées dans la statistique canadienne des importations sont expliquées en page sous la rubrique "Abréviations, définitions et unités de quantité". Dans plusieurs cas, il a fallu recourir à des facteurs de conversion afin de convertir les anciennes classes aux unités de quantité requises dans la nouvelle Classification des Marchandises d'Importation. Cependant, les quantités ont été omises dans les deux cas suivants: premièrement, lorsque les valeurs des anciennes classes furent attribuées au prorata à plusieurs nouvelles classes; deuxièmement, lorsque deux ou plusieurs anciennes classes contenant des unités de quantité différentes furent attribuées à une seule nouvelle classe.

5. **Values:** The value of goods imported is usually the value as determined for customs duty. In most cases, this corresponds to the value shown on the invoice accompanying the goods, converted to Canadian dollars at authorized exchange rates (usually the commercial rate prevailing on the date on which the goods were actually despatched to Canada). The Canadian Customs Act generally requires the valuation of goods f.o.b. point of shipment in the country of export, but in recent years importers have often reported c.i.f. values for free goods or goods subject to specific rates of duty. An effort is made to ensure that f.o.b. values are consistently used in import statistics in the following cases: goods subject to dumping duty (from January, 1959); raw cotton and crude petroleum (from January, 1962, retroactive to January, 1960); raw sugar (from January, 1963, retroactive to January, 1961); and all shipments individually valued at \$100,000 or more (from January, 1964). Only about one fifth of the value of imports is covered by those specific checks.

5. **Valeurs:** Ordinairement, la valeur des marchandises importées est la valeur déterminée pour fins de douane. Dans la plupart des cas, la valeur en douane correspond à la valeur indiquée sur les factures qui accompagnent les marchandises, convertie en dollars canadiens au taux d'échange autorisé (habituellement le taux commercial à la date où les marchandises ont été effectivement expédiées au Canada). La loi canadienne sur les douanes exige généralement l'évaluation des marchandises f.à.b. au point d'expédition dans le pays exportateur mais, ces dernières années du moins, les importateurs ont souvent déclaré la valeur c.a.f. pour les marchandises en franchise ou les marchandises sujettes à un tarif déterminé. On s'efforce d'assurer que la valeur f.à.b. soit régulièrement employée dans la statistique des importations suivantes: les marchandises sujettes au tarif de dumping (depuis janvier 1959) le coton brut et le pétrole brut (depuis janvier 1962, avec effet rétroactif à janvier 1960); le sucre brut (depuis janvier 1963, avec effet rétroactif à janvier 1961); et toutes les expéditions évaluées à \$100,000 ou plus chacune (depuis janvier 1964). Ces contrôles déterminés ne couvrent qu'un cinquième environ de la valeur des importations.

7. Changes in Coverage of Commodity Statistics

Effective January 1, 1960, a new category of export and import transactions was established under the heading of "Special Transactions—Non-trade". These transactions are excluded from the trade totals, but are published for the convenience of users of this information. The commodity classes contained in this category are as follows:

Class	Description	Former treatment	
		Exports	Imports
990-05 to 990-65	Gold and current coin	excluded	excluded
995-10	Settlers' effects	included	included
995-12	Private donations and gifts	included	included
995-14	Identifiable tourist purchases	partly included	included
995-81	Goods exported to Canadian diplomatic representatives or Canadian armed forces stationed abroad	excluded	largely included
995-83	Goods exported for exhibition or competition and intended to be returned to Canada	excluded	excluded
995-85	Photographic film moving for exhibition or processing without sale	partly included	partly included

Of these classes, settlers' effects and private donations and gifts were included in the total trade prior to 1960. Movements of goods for Canadian armed forces and diplomats abroad were excluded from export totals but movements of goods for foreign armed forces or diplomats in Canada were largely included in import totals. Tourist purchases in Canada were recorded in the appropriate export commodity classes and duty exempt Canadian tourists' purchases abroad were recorded in a separate import class, both types of transactions being included in the trade totals. But while all duty-exempt Canadian tourists' purchases abroad were recorded, the coverage of tourist purchases in Canada was limited to those transactions for which customs export entries are normally required (mail and express shipments only). Photographic film exported or imported without sale was only partly included in the trade totals. Exports and imports of gold and current coin, and temporary movements of goods for exhibition or competition were excluded from the trade totals.

Thus, prior to 1960 the published totals included various commodity movements which either have no international financial implications or, for various reasons, are better considered separately from merchandise trade in economic analysis. Furthermore, some of these transactions did not receive uniform treatment in export and import statistics. The removal of these transactions from export and import totals on a uniform basis has greatly improved balance of trade calculations derived directly from these statistics.

7. Modifications apportées à la couverture statistique des marchandises

A compter du 1er janvier 1960, une nouvelle catégorie de transactions d'exportations et d'importations a été établie sous la rubrique "Transactions spéciales—hors-commerce". Ces transactions sont exclues des totaux du commerce mais sont publiées pour accommoder les intéressés. Les classes de marchandises de cette catégorie sont les suivantes:

Classe	Description	Traitement antérieur	
		Exportations	Importations
990-05 à 990-65	Or et monnaie courante	exclus	exclus
995-10	Effets des colons	inclus	inclus
995-12	Dons et cadeaux particuliers	inclus	inclus
995-14	Achats identifiables des touristes	partiellement inclus	inclus
995-81	Marchandises expédiées aux représentants diplomatiques canadiens ou aux forces armées canadiennes à l'étranger	exclus	en grande partie inclus
995-83	Marchandises exportées pour exposition ou concours et devant revenir au Canada	exclus	exclus
995-85	Mouvements de films photographiques en et vue d'expositions ou de développement		
995-89	sans qu'il y ait vente	partiellement inclus	partiellement inclus

Parmi ces classes, les effets des colons et les dons et cadeaux particuliers étaient inclus dans les totaux du commerce, antérieurement à 1960. Les mouvements de marchandises destinées aux forces armées et aux diplomates canadiens à l'étranger étaient exclus des exportations, mais ceux des marchandises destinées aux forces armées et aux diplomates étrangers au Canada étaient en grande partie inclus dans les totaux des importations. Les achats des touristes au Canada s'inscrivaient dans les classes appropriées de marchandises exportées et les achats en franchise s'inscrivaient dans une classe d'importation distincte, les deux formes de transactions étant incluses dans les totaux du commerce. Mais alors que tous les achats en franchise des Canadiens à l'étranger étaient inscrits, la couverture des achats des touristes au Canada se limitait aux transactions exigeant normalement des inscriptions des ports douaniers (expéditions par la poste et les messageries seulement). Les films photographiques exportés ou importés sans être vendus, n'étaient inclus qu'en partie dans les totaux du commerce. Les exportations et les importations d'or et de monnaie courante et les mouvements temporaires de marchandises destinées aux expositions ou concours étaient exclus des totaux du commerce.

Ainsi, jusqu'à 1960, les totaux publiés comprenaient divers mouvements de marchandises qui n'ont aucune implication internationale ou qu'il vaut mieux, pour diverses raisons, isoler du commerce des marchandises pour l'analyse économique. De plus, la statistique des exportations et des importations n'a pas traité uniformément certaines de ces transactions dont la disparition des chiffres des exportations et des importations d'après une base uniforme, a sensiblement amélioré les calculs de la balance des échanges tirés directement de cette statistique.

COUNTRY CLASSIFICATION USED IN EXTERNAL TRADE STATISTICS

Effective January 1, 1960, a new country classification was introduced for export and import statistics. This classification groups countries within the following nine geographic regions:

Western Europe
Eastern Europe
Middle East
Other Africa
Other Asia
Oceania
South America
Central America and Antilles
North America

The order in which the various regions are arranged was determined by the convenience of listing the United Kingdom first, when presenting statistics of commodities by countries, and the United States last, directly above the commodity totals. This arrangement is traditional in Canadian trade statistics, and has proven most useful in permitting ready reference to details of trade with Canada's two leading trading partners.

Within each region the countries are listed in alphabetical order in two sub-groups, the first for Commonwealth countries and other countries entitled to preferential rates of duty, and, the second for other countries. For any country the area included coincides with the geographical area of the country unless otherwise stated; that is the area includes both the customs area of the country and also any free areas in which customs control may not be exercised. Countries with which Canada's trade is small are grouped with contiguous or related areas.

Revisions to the country classification, effective January 1, 1961 and January 1, 1962, are indicated by an asterisk to the left of the country code.

CLASSIFICATION DES PAYS POUR LA STATISTIQUE DU COMMERCE EXTÉRIEUR

A compter du 1er janvier 1960, la statistique des exportations et des importations comprend une nouvelle classification qui groupe les pays dans les neuf régions géographiques suivantes:

Europe occidentale
Europe orientale
Moyen-Orient
Autres pays d'Afrique
Autres pays d'Asie
Océanie
Amérique du Sud
Amérique centrale et Antilles
Amérique du Nord

L'ordre dans lequel les diverses régions sont énumérées a été établi de façon à indiquer d'abord le Royaume-Uni dans la présentation de la statistique des marchandises selon les pays, et les États-Unis en dernier, directement au-dessus des totaux de marchandises. Cette disposition est traditionnelle dans la statistique du commerce canadien et s'est révélée très utile en ce qu'elle permet de se référer rapidement aux données du commerce du Canada avec ses deux principaux partenaires commerciaux.

Au sein de chaque région, les pays sont groupés en deux sous-groupes: le premier, pour les pays du Commonwealth et les autres pays bénéficiant du tarif préférentiel, et le second, pour les autres pays. A moins d'indication contraire, l'étendue d'un pays coïncide avec son étendue géographique, c'est-à-dire qu'il comprend la région douanière et aussi toutes régions libres où le contrôle douanier n'est peut-être pas exercé. Les pays avec lesquels le commerce du Canada n'est pas considérable sont groupés avec les régions contiguës ou connexes.

Les révisions apportées à la classification des pays est entrée en vigueur le 1er janvier 1961 et le 1er janvier 1962, sont indiquées par un astérisque à la gauche du code du pays.

NEW IMPORT COMMODITY CLASSIFICATION

Effective January 1, 1964 a new Import Commodity Classification was introduced for use in the compilation of Import Trade Statistics. This new classification is based on the Standard Commodity Classification which was developed in the Dominion Bureau of Statistics as a tool for integrating statistical series derived from various sources.

In order to satisfy requests for historical series based on the new concepts embodied in the Import Commodity Classification, it was decided to convert 1960-1962 import statistics to the new framework.

Although the information presented in the present report, Trade of Canada, Volume III, Imports, 1961-1962, is entirely based on the original January, 1964 Import Commodity Classification, Volume I, the following descriptive notes also generally would apply to any later edition. These notes supplement those appearing in Trade of Canada, Volume III, Imports, 1963-1964.

The Import Commodity Classification is divided into seven "Sections" as follows:

Section	Title	Classes
I	Live animals	1-19 to 9-99
II	Food, feed, beverages and tobacco ..	11-09 " 183-99
III	Crude materials, inedible	201-10 " 291-99
IV	Fabricated materials, inedible	301-10 " 496-99
V	End products, inedible	501-19 " 961-99
VI	Special transactions—Trade	970-10 " 970-99
VII	Special transactions—Non-trade	990-05 " 995-89

Section I contains all live animals except live fish and other seafoods shipped for use as food, which are included in Section II.

Section II contains all other commodities whose chief end use is as food, feed, beverages or tobacco. Because any commodity at one stage of processing is located in only one place in the classification, certain non-food grades of chiefly food commodities (e.g. seed wheat and seed potatoes) are classified in this section, and certain food grades of chiefly non-food commodities (e.g. edible tallow and vegetable oils) are excluded. Within this section the commodities are further classified by component material and stage of processing.

Section III contains all commodities whose chief use is as materials for industry, and which have not been processed beyond the stage of cleaning, sorting or concentrating, together with the synthetic equivalents of some natural materials. Waste and scrap materials which are principally used for the same purpose as particular crude materials are included with those materials; other waste and scrap materials are grouped at the end of the section—within this section the commodities are further classified by component material.

Section IV contains all commodities which have passed the preliminary stages of processing but which are still used chiefly as materials in some later industrial process. Some commodities in this section are highly processed and the chief part of their value may be derived from manufacturing. But all have in common the basic characteristic of materials, i.e., they will be subjected to (or used up in) further industrial operations in the course of which their form will be changed or their identity lost. Within this section the commodities are further classified chiefly by component material.

Section V contains all commodities which will not lose their identity through further processing, and which are commonly regarded as articles rather than as materials, together with finished identifiable parts, attachments and accessories of these articles. Within this section the commodities are further classified chiefly by principal use or function.

NOUVELLE CLASSIFICATION DES MARCHANDISES D'IMPORTATION

Une nouvelle Classification des Marchandises d'Importation est entrée en vigueur le 1er janvier 1964 aux fins de la compilation de la statistique du commerce d'importation. Elle se fonde sur la Classification type des marchandises mise au point au Bureau fédéral de la statistique en vue de l'intégration des séries statistiques tirées de diverses sources.

Il a paru utile de faire la conversion de la statistique des importations pour les années 1960, 1961 et 1962 selon les nouveaux concepts utilisés dans le développement de la Classification des Marchandises d'Importation pour répondre aux demandes de séries historiques nécessaires aux fins d'analyse et de recherche.

Bien que les renseignements contenus dans le présent rapport "Commerce du Canada, Volume III, Importations, 1961-1962" soient basés en entier sur la "Classification des Marchandises d'Importation de janvier 1964, Volume I", les notes descriptives qui suivent s'appliquent aussi en général, aux éditions subséquentes. Les présentes notes complètent celles qui ont déjà paru dans le rapport "Commerce du Canada, Volume III, Importations, 1963-1964".

La Classification des Marchandises d'Importation comprend les sept sections suivantes:

Section	Titre	Classes
I	Animaux vivants	1-19 à 9-99
II	Aliments, provendes, boissons et tabacs ..	11-09 à 183-99
III	Matières brutes non comestibles	201-10 à 291-99
IV	Matières travaillées non comestibles	301-10 à 496-99
V	Produits finis non comestibles	501-19 à 961-99
VI	Transactions spéciales—commerciales ..	970-10 à 970-99
VII	Transactions spéciales—hors commerce ..	990-05 à 995-89

Section I contient tous les animaux vivants sauf le poisson vivant et autres fruits de mer expédiés pour usage alimentaire et qui sont compris dans la Section II.

Section II contient toutes les autres denrées qui servent principalement d'aliments, de provendes, de boissons ou de tabacs. Étant donné qu'une denrée à un stade de transformation ne se trouve qu'à un seul endroit dans la Classification, certaines qualités non alimentaires de denrées surtout alimentaires (e.g. blé de semence, pommes de terre de semence) sont classées dans la présente section et certaines qualités alimentaires de denrées surtout non alimentaires (suif comestible et huiles végétales) sont exclues. Dans la section même, les produits se subdivisent en outre suivant la matière constituante et le stade de fabrication.

Section III contient tous les produits qui servent principalement de matières premières dans l'industrie et qui n'ont pas été transformés au-delà du nettoyage, du triage ou de la concentration de même que les équivalents synthétiques de certaines matières naturelles. Les déchets et les matières de rebut qui servent principalement à la même fin comme matières brutes particulières sont incluses dans ces matières, les autres déchets et rebuts sont groupés à la fin de la section. Dans la section même, les produits se subdivisent en outre suivant la matière constituante.

Section IV contient tous les produits qui ont passé par les premiers stades de la transformation mais qui servent encore principalement de matières à quelque fin industrielle ultérieure. Certaines marchandises de cette section sont très ouvrées et la majeure partie de leur valeur peut venir de leur transformation. Toutes cependant ont en commun la caractéristique de base de matières, c'est-à-dire qu'elles seront soumises (ou serviront) à de plus amples transformations industrielles au cours desquelles leur forme sera modifiée et leur identité perdue. Dans la section même, les produits se subdivisent en outre principalement suivant la matière constituante.

Section V contient toutes les marchandises qui ne perdront pas leur identité par une plus ample transformation et qui sont ordinairement tenues pour des articles plutôt que des matières ainsi que leurs pièces et accessoires. Dans la section même, les produits se subdivisent en outre principalement suivant leur usage ou leur fonction.

Section VI contains certain essentially commercial transactions which are not, for various reasons, classified by commodity in trade statistics; some import packing, all goods previously exported from Canada which are returned to Canada within five years after having been exported, and small value shipments. The value of these transactions is included in published totals of Canadian imports.

Section VII contains certain transactions which do not have an international financial implication or which, for various reasons, are better considered separately from merchandise trade in economic analysis, e.g.: gold, tourist purchases and settlers' effects. The value of these transactions is not included in published totals of Canadian trade, but statistics are compiled because they have independent value.

The introduction of the Import Commodity Classification in January, 1964 created serious difficulties in making accurate comparisons between statistics for 1964 and earlier years. The comparisons given in the body of this report are based on a careful study of data for two test months (February 1961 and June 1963) which were coded to both the old classification and the new classification and cross-tabulated. This study was supplemented by further studies of the content of the large "n.o.p." classes of the former classification, and of other unpublished records. Numerous new classes were introduced between 1960 and 1963; other former classes were renumbered and important changes in the contents of the former classes took place so that it was felt necessary to produce a different conversion key for each year.

This key differs in several respects from the information presented in Volume I of the Import Commodity Classification, January, 1964 and from the revised edition, January, 1966. In particular, the studies on which it is based are more comprehensive than those available when the Import Commodity Classification was prepared or revised, and a number of errors in the original presentation have been corrected. Differences in the purpose of the classification and the key also affect their content. The classification shows for each class all the principal former classes from which the class was derived; the key on the other hand shows only those former classes from which a major part of the value of each class was derived. The key is more applicable to problems of statistical analysis as it makes it possible to obtain accurate totals for all sections and divisions of the new classification for 1962, 1961 and 1960. The number of comparable classes and groups is shown in Table I and the value of trade in each comparability grouping appears in Table II.

1. In this key the 1962, 1961 and 1960 classes which do not convert to a single commodity class but fall entirely within a single commodity group are assigned to the residual class of the group. Where the group contains more than one residual class, or where a 1964 group has no true residual class, an artificial group residual has been created.
2. When analysis revealed that a definite proportion of a large former class constituted a major part of any commodity group, without being applicable to a single commodity class, that proportion was also allocated to the group residual.
3. All former classes which did not fall within a single commodity group but fell in different groups within a single commodity division were allocated to an artificial division residual class.
4. All former classes which did not fall within a single commodity division were prorated among the divisions to which they pertain in the proportions determined by various studies. These proportions sometimes differ from year to year.

Section VI contient certaines transactions essentiellement commerciales qui, pour diverses raisons, ne se classent pas par marchandises dans la statistique du commerce: certains emballages d'importation, toutes les marchandises exportées antérieurement et retournées au Canada dans les cinq ans qui suivent leur exportation, et les expéditions de faible valeur. La valeur de ces transactions est comprise dans les totaux publiés des importations canadiennes.

Section VII contient certaines transactions qui n'ont pas de signification financière internationale ou qu'il est préférable, pour diverses raisons, de traiter séparément du commerce des marchandises pour fin d'analyse économique, par exemple, l'or, les achats de touristes et les effets d'immigrants. La valeur de ces transactions n'est pas comprise dans les totaux du commerce canadien mais la statistique en est établie en raison de leur valeur indépendante.

L'entrée en vigueur de la Classification des Marchandises d'Importation (C.M.I.) en janvier 1964 a compliqué singulièrement l'établissement de comparaisons exactes entre la statistique de 1964 et celle des années antérieures. Les comparaisons données dans le présent rapport sont fondées sur une étude attentive des observations de deux mois de contrôle (février 1961 et juin 1963), qui ont été codées suivant l'ancienne classification et suivant la nouvelle classification de 1964 et recoupées. Cette étude a été complétée par d'autres études du contenu de grandes classes "n.d.a." de l'ancienne classification, des décisions internes et d'autres documents inédits. De nombreuses nouvelles classes ont été introduites entre 1960 et 1963, d'autres anciennes classes ont été renumérotées, et d'importants changements sont intervenus dans le contenu des anciennes classes de sorte qu'il a fallu mettre au point une clé de conversion différente pour chaque année.

La clé diffère à divers points de vue des renseignements contenus dans le Volume I de la "Classification des Marchandises d'Importation", de janvier 1964, et de l'édition révisée de janvier 1966. En particulier, les études sur lesquelles elle se fonde sont plus complètes que celles qui existaient lors de l'établissement ou de la révision de la Classification des Marchandises d'Importation et un certain nombre d'erreurs dans la présentation initiale ont été corrigées. Une différence d'objet influe aussi sur le contenu de la classification et de la clé: la classification montre pour chaque classe toutes les anciennes classes principales d'où est tirée une classe, d'autre part, la clé montre que les anciennes classes d'où est tirée une partie importante de la valeur de chaque classe de la Classification des Marchandises d'Importation. La clé est beaucoup plus adaptable aux problèmes de l'étude statistique car elle permet d'obtenir des chiffres exacts pour 1962, 1961 et 1960, à l'égard de toutes les sections et divisions de la nouvelle Classification. Le nombre de groupes et de classes comparable paraît au tableau I, et la valeur du commerce dans chaque groupement de comparabilité au tableau II.

1. Dans cette clé, les classes de 1962, 1961 et 1960 qui ne sont pas ramenées à une classe unique de marchandises, mais s'inscrivent entièrement dans un seul groupe de marchandises sont attribuées à la classe résiduelle du groupe. Lorsqu'un groupe contient plus d'une classe résiduelle, ou là où un groupe de 1964 n'a pas de vraie classe résiduelle, une classe résiduelle artificielle du groupe a été établie.
2. Lorsque l'étude révélait qu'une proportion définie d'une ancienne classe importante en valeur formait une proportion significative de quelque groupe de marchandises sans s'appliquer à une classe unique de marchandises, cette proportion était aussi attribuée à la classe résiduelle du groupe.
3. Toutes les anciennes classes qui ne tombaient pas dans un seul groupe de marchandises mais s'inscrivaient dans différents groupes au sein d'une seule division de marchandises, furent attribuées à une classe résiduelle artificielle de la division.
4. Toutes les anciennes classes qui ne tombaient pas dans une division unique de marchandises ont été réparties au prorata entre les divisions auxquelles elles appartiennent dans les proportions déterminées par les diverses études. Ces proportions diffèrent parfois d'une année à l'autre.

In applying rule 4, three possibilities were recognized. Whenever a prorated portion of such 1962, 1961 or 1960 classes pertained to one class in a commodity division, and made possible a valid class level comparison, it was coded to the commodity class in question. Similarly, prorated portions pertaining entirely to a particular commodity group and completing a group level comparison, were assigned to that group's residual class. If neither of these conditions was met, the prorated portions were assigned to the division residual class.

In two cases division-type residual classes were created at a sub-division level:

- (a) Textiles were prorated on the basis of the two sub-divisions: broad woven fabrics (groups 371-377) and other textile fabricated materials (groups 381-389). It was not necessary to use sub-division 360-00 for the allocation of yarn, thread, cordage and batts (groups 360-369).
- (b) Chemicals were prorated at three sub-division levels: inorganic chemicals (groups 400-405), organic chemicals (groups 406-413) and chemical products (groups 415-429).

While division and sub-division residuals always complete the value for the division or sub-division in question, a group residual class may or may not complete the value for the group, or may contain in addition small values from other groups within the division which could invalidate a comparison. Footnotes in the "Convertibility Key" indicate whether or not group residuals complete group values or contain values which normally would pertain in small proportions to various other groups within the division. In general, no attempt was made to prorate classes with annual values below \$100,000; this is usually why certain group residuals contain parts of other groups within their respective divisions.

The Convertibility Key has certain major limitations:

- (a) the test months (February, 1961 and June, 1963) which served as the base for calculations were not necessarily representative of all classes, such as those subject to seasonal variations, and therefore comparisons for individual classes, months, or quarters may not be valid;
- (b) studies of large "n.o.p." classes were conducted from annual records, and revealed that large values for some commodities can be the result of a few irregular large shipments; this would also tend to invalidate monthly comparisons;
- (c) the analysis was conducted at the class total level, not the class-by-country level.

It nevertheless is believed that the class level and division level comparisons derived from this key will generally be adequate even for individual months and countries.

The following tables show the number of 1962, 1961 and 1960 groups and classes for which comparisons can be made and the 1962, 1961 and 1960 group and class values covered by such comparisons.

The tables illustrate clearly that, notwithstanding the change in classification effective January, 1964 comparisons between statistics based on the 1964 Import Commodity Classification are possible for a significant proportion of Canada's import trade in 1962, 1961 and 1960. For 59%, 54% and 50% of the classes of the new classification a simple comparison can be made with 1962, 1961 and 1960 statistics respectively and these classes accounted for 53% in 1962, 50% in 1961 and 48% in 1960 of the value of import trade. In 1962, 61% of the groups accounting for 62% of the value were comparable, while in 1961, 58% of the groups accounting for 60% of the value and in 1960, 57% of the groups accounting for 60% of the value were comparable.

Dans l'application de la règle 4, trois possibilités ont été reconnues. Chaque fois qu'une portion répartie au prorata de telles classes de 1962, 1961 et 1960 appartenait entièrement à une classe dans une division de marchandises et permettait une comparaison valable au niveau de la classe, elle fut assignée à la classe de marchandises en question. De même, les portions fixées au prorata appartenant entièrement à un groupe particulier de marchandises et complétant une comparaison au niveau du groupe ont été attribuées à la classe résiduelle de ce groupe. Si aucune de ces conditions n'était réalisée, les portions au prorata furent attribuées à la classe résiduelle de la division.

Dans deux cas, il a été établi des classes résiduelles division-type à un niveau de subdivision.

- a) Les textiles ont été répartis au prorata, sur la base de deux subdivisions tissus larges (groupes 371-377) et autres ouvrages aux matières textiles (groupe 381-389). Il n'a pas été nécessaire d'utiliser la subdivision 360-00 pour l'attribution des filés, fils, cordages et ouate (groupes 360-369).
- b) Trois subdivisions ont été utilisées pour les produits chimiques: produits chimiques inorganiques (groupes 401-405), produits chimiques organiques (groupes 406-413) et produits chimiques (groupes 415-429).

Bien que les classes résiduelles de divisions et de subdivisions complètent toujours la valeur de la division ou de la subdivision en question, une classe résiduelle de groupe peut ou non compléter la valeur du groupe ou peut contenir en outre de petites valeurs venant d'autres groupes au sein de la division qui pourraient rendre nulle une comparaison. Les renvois dans la "Clé de convertibilité" indiquent si les classes résiduelles de groupes complètent ou non la valeur du groupe ou contiennent des valeurs qui normalement appartiendraient en petites proportions à divers autres groupes dans la division. En général, on n'a pas tenté de fixer au prorata les classes où la valeur annuelle est inférieure à \$100,000; c'est pourquoi, ordinairement certaines classes résiduelles de groupes contiennent des parties d'autres groupes dans leurs divisions respectives.

La Clé de convertibilité contient certaines réserves importantes:

- a) Les mois de contrôle (février 1961 et juin 1963) qui ont servi de base aux calculs ne représentaient pas nécessairement toutes les classes, celles surtout qui sont sujettes aux variations saisonnières, de sorte que les comparaisons quant aux classes, aux mois ou aux trimestres ne sont peut-être pas valables.
- b) Des études des classes importantes en valeur "n.d.a." ont été faites à partir des données annuelles; elles ont révélé que des valeurs élevées dans le cas de certaines marchandises peuvent résulter de quelques fortes expéditions irrégulières, ce qui aussi, tendrait à rendre nulles des comparaisons mensuelles.
- c) L'étude a été faite au niveau du total de la classe et non au niveau de la classe par pays.

On est d'avis, cependant, que les comparaisons au niveau de la classe et au niveau de la division tirées de cette clé seront, en général, suffisantes, même pour chaque mois et chaque pays.

Les tableaux suivants indiquent le nombre de groupes de marchandises et de classes comparables de 1962, 1961 et 1960 et les valeurs des groupes et des classes de 1962, 1961 et 1960 visées par ces comparaisons.

Les tableaux indiquent clairement qu'en dépit du changement apporté à la classification en janvier 1964, les comparaisons entre la statistique fondée sur la Classification des Marchandises d'Importation de 1964 sont possibles pour une proportion considérable du commerce d'importation du Canada en 1962, 1961 et 1960. Dans 59 p. 100, 54 p. 100 et 50 p. 100 des classes de la nouvelle classification, une comparaison simple peut se faire pour la statistique de 1962, 1961 et 1960 respectivement et ces classes étaient comptables pour 53 p. 100 en 1962, 50 p. 100 en 1961 et 48 p. 100 en 1960 de la valeur des importations. En 1962, 61 p. 100, en 1961, 58 p. 100 et en 1960, 57 p. 100 des groupes (comptables pour 62 p. 100, 60 p. 100 et 60 p. 100 respectivement de la valeur) étaient comparables.

The tables also reveal the greater emphasis placed on fabricated materials and end products than in the old classification. For fabricated materials comparisons are possible for 58%, 50% and 48% of the classes in 1962, 1961 and 1960 respectively and 50%, 46% and 46% of the groups. For end products the pattern is more extreme; comparisons are possible for only 46% in 1962, 42% in 1961 and 36% in 1960 of the classes, accounting for 30%, 28% and 26% respectively of the total value for end products, while 45%, 45% and 40% of the groups accounting for 44%, 45% and 45% of the values in 1962, 1961 and 1960 are suitable for comparison purposes.

Les tableaux révèlent également qu'on attache plus d'importance aux matières travaillées et aux produits finis que dans l'ancienne classification. Pour les matières travaillées, 58 p. 100, 50 p. 100 et 48 p. 100 des classes en 1962, 1961 et 1960 et 50 p. 100, 46 p. 100 et 46 p. 100 des groupes respectivement se prêtaient à la comparaison. Dans le cas des produits finis la courbe est plus prononcée; des comparaisons sont possibles pour seulement 46 p. 100, 42 p. 100 et 36 p. 100 des classes en 1962, 1961 et 1960 respectivement (comptables pour 30 p. 100, 28 p. 100 et 26 p. 100 respectivement de la valeur totale des produits finis tandis que 45 p. 100, 45 p. 100 et 40 p. 100 des groupes (représentant 44 p. 100, 45 p. 100 et 45 p. 100 des valeurs en 1962, 1961 et 1960) se prêtaient à la comparaison.

**CONVERTIBILITY KEY TO ESTABLISH RELATIONSHIP
TO 1964 COMMODITY CLASSES FROM 1962, 1961 AND
1960 IMPORT STATISTICS**

The convertibility key shows, for each class of the 1964 Import Commodity Classification whether comparisons can be obtained from 1962, 1961 and 1960 statistics and the degree of reliability that should be attached to such comparisons. It also indicates where groupings of 1962, 1961 and 1960 classes (or part of these classes) will complete comparisons for particular divisions or groups of the 1964 Import Commodity Classification.

The columns of the key contain the following information:

1. Column 1, "1964 Class" lists the codes of all classes for which statistics were compiled in 1964, and also codes for a few group or division residual classes needed to improve comparisons between 1964 and earlier statistics. The key lists all classes in 1964 numeric order.
2. Column 2, "1962 Class" shows the 1962 class code or codes from which 1962 values for 1964 classes were derived.
3. Column 3, "1961 Class", shows the 1961 class code or codes different from 1962, from which 1961 values for 1964 classes were derived. Whenever the 1961 codes are the same as those used in 1962 the word "same" appears instead of a code.
4. Column 4, "1960 Class" shows the 1960 class code or codes different from 1961, for which 1960 values for 1964 classes were derived. Whenever the 1960 codes are the same as those used in 1961 the word "same" appears instead of a code.
5. Column 5, "1962 Equivalence" contains an alphabetic code indicating the quality of the comparisons for 1962, and a numeric reference when required to explanatory footnotes at the bottom of the page.
6. Column 6, "1961 Equivalence" contains an alphabetic code indicating the quality of the comparison for 1961, which may or may not be the same as 1962 and a numeric reference to explanatory footnotes when required.
7. Column 7, "1960 Equivalence" contains an alphabetic code indicating the quality of the comparison for 1960, which may or may not be the same as 1961 or 1962, and a numeric reference to explanatory footnotes when required.

The alphabetic equivalence code is as follows:

Class Level Comparisons:

- (a) 1962, 1961 or 1960 statistics believed to be almost comparable with 1964 (100 ± 5% discrepancy), within the limits of any qualifications set forth in footnotes.
- (b) 1962, 1961 or 1960 statistics believed to be substantially comparable with 1964, but with the 1964 class including only 85% to 95% of the content of the 1962, 1961 or 1960 class or classes, and subject to any qualifications set forth in footnotes.
- (c) 1962, 1961 or 1960 statistics believed to be substantially comparable with 1964, but with the 1964 class including a somewhat broader range of goods than the 1962, 1961 or 1960 class or classes (between 105% to 115%), and subject to any qualifications set forth in footnotes.

**CLÉ DE CONVERTIBILITÉ POUR OBTENIR DE LA
STATISTIQUE DES IMPORTATIONS DE 1962,
1961 ET 1960 DES COMPARAISONS POUR
LES CLASSES DE 1964**

La clé de convertibilité montre, pour chaque classe de la Classification des Marchandises d'Importation (C.M.I.), si l'on peut tirer des comparaisons de la statistique de 1962, 1961 et 1960 ainsi que le degré de confiance que l'on peut avoir en ces comparaisons. Elle indique également si les regroupements des classes de 1962, 1961 et 1960 (ou une partie de ces classes) complètent les valeurs, pour fin de comparaisons, d'une division ou d'un groupe en particulier de la Classification des Marchandises d'Importation de 1964.

Les colonnes de la clé contiennent les renseignements suivants:

1. La 1ère colonne, "classe de 1964", donne les numéros de toutes les classes pour lesquelles la statistique a été établie en 1964 de même que ceux de quelques classes artificielles de groupes ou divisions nécessaires pour améliorer les comparaisons entre 1964 et les statistiques antérieures. La clé énumère toutes les classes dans l'ordre numérique de 1964.
2. La 2e colonne "classe de 1962" donne le ou les numéros de la ou des classes de 1962 desquelles les valeurs de 1962 pour les classes de 1964 ont été tirées.
3. La 3e colonne "classe de 1961" donne le ou les numéros de la ou des classes de 1961 qui diffèrent de ceux de 1962, desquelles les valeurs de 1961 pour les classes de 1964 sont tirées. Partout où les numéros de 1961 sont les mêmes qu'en 1962, le mot "same" qui signifie "même", paraît plutôt qu'un numéro.
4. La 4e colonne "classe de 1960", donne le ou les numéros de la classe ou des classes de 1960 qui diffèrent de ceux de 1961, desquelles les valeurs pour les classes de 1964 sont tirées. Partout où les numéros de 1960 sont les mêmes qu'en 1961, le mot "same" qui signifie "même" paraît plutôt qu'un numéro.
5. La 5e colonne "équivalence de 1962", contient un indicatif alphabétique montrant la qualité de la comparaison de 1962 et une référence numérique aux renvois explicatifs du bas de la page en cas de besoin.
6. La 6e colonne "équivalence de 1961", contient un indicatif alphabétique montrant la qualité de la comparaison de 1961, qui peut ou non être la même qu'en 1962, et une référence numérique aux renvois explicatifs du bas de la page en cas de besoin.
7. La 7e colonne "équivalence de 1960", contient un indicatif alphabétique montrant la qualité de la comparaison de 1960 qui peut ou non être la même qu'en 1961 ou en 1962, et une référence numérique aux renvois explicatifs du bas de la page en cas de besoin.

L'indicateur alphabétique d'équivalence est le suivant:

Comparaison au niveau de la classe:

- a) Statistiques de 1962, 1961 ou 1960 jugées à peu près comparables à celles de 1964 (100% ± 5% de divergence) dans les limites de toutes réserves mentionnées dans les renvois.
- b) Statistiques de 1962, 1961 ou 1960 jugées comparables en bonne partie à celles de 1964, mais la classe de 1964 ne contenant que 85% à 95% du contenu de la ou les classes de 1962, 1961 ou 1960, et sujette aux réserves mentionnées dans les renvois.
- c) Statistiques de 1962, 1961 ou 1960 jugées comparables en bonne partie à celles de 1964, mais la classe de 1964 contenant une gamme de marchandises quelque peu plus large que la ou les classes de 1962, 1961 ou 1960 (entre 105% et 115%) et sujette aux réserves mentionnées dans les renvois.

Group or Division Residuals:

(d) Identifies group residual classes which cover 1962, 1961 or 1960 values known to fall within a specific group of the Import Commodity Classification but which can not be allocated to specific classes. Footnotes indicate in every case whether the group residual completes the 1962, 1961 or 1960 total for the group and the quality of the resulting comparison. Approximately fifteen such artificial group residuals were created. This technique is especially useful when 1962, 1961 or 1960 values for one or more former classes (or specific proportions thereof) can not be accurately converted to individual 1964 classes, but are known to account for the entire value of the group. These artificial group residuals make it possible to establish valid comparisons between 1964, 1962, 1961 or 1960 statistics for definite groups of homogeneous classes derived from broader former classes. They are all described in their corresponding footnotes.

(e) Identifies residual classes which cover 1962, 1961 or 1960 values known to fall within a specific commodity division, but which can not be allocated by class or group. These division residual commodity classes are especially useful in allocating large heterogeneous former classes (mostly the "basket" or n.o.p. classes) which could not otherwise be distributed to particular classes or groups. The allocation of such commodity classes is based on the two test months and the analysis of special records over a five-year period, and changes in their content were taken into account in allocating various percentages to different divisions in particular years.

They are listed at the beginning of their respective divisions and are identified by the terminal digits "00". Division residual classes always complete the 1962, 1961 and 1960 values for their division. It is believed that a quality comparison "a" can always be made between division totals for 1962, 1961 and 1960.

Classes résiduelles de groupes ou de divisions:

d) Identifie les classes résiduelles de groupe qui couvrent les valeurs de 1962, 1961 ou 1960 connues comme s'inscrivant dans un groupe déterminé de la Classification des Marchandises d'Importation mais qui ne peuvent être attribuées à des classes précises. Les renvois indiquent dans chaque cas si la classe résiduelle de groupe complète le total de 1962, 1961 ou 1960 pour le groupe et la qualité de la comparaison résultante. Environ quinze classes artificielles résiduelles de groupe ont été établies. Cette technique est particulièrement utile lorsque les valeurs de 1962, 1961 ou 1960 pour une ou plusieurs anciennes classes (ou proportions déterminées de celles-ci) ne peuvent pas être converties à des classes déterminées de 1964, mais que l'on sait être comptables de la valeur entière du groupe. Ces classes artificielles résiduelles de groupe permettent de faire des comparaisons valables entre la statistique de 1964, 1962, 1961 ou 1960 pour des groupes définis de classes homogènes tirées d'anciennes classes plus larges. Elles sont toutes décrites dans leurs renvois correspondants.

e) Identifie les classes résiduelles qui couvrent les valeurs de 1962, 1961 ou 1960 que l'on sait s'inscrire dans une division déterminée de marchandises mais qui ne peuvent être réparties par classe ou groupe. Ces classes résiduelles de division sont particulièrement utiles dans la répartition d'anciennes classes hétérogènes (la plupart des classes "n.d.a.") qui autrement, ne pourraient être attribuées à des classes ou des classes ou des groupes particuliers. La répartition de ces classes de marchandises se fonde sur les deux mois de contrôle et sur l'analyse de dossiers spéciaux durant une période de cinq ans, et dans la répartition des divers pourcentages entre les différentes divisions, certaines années, il a été tenu compte des variations de leur contenu.

Ces classes sont énumérées au début de leurs divisions respectives et s'identifient par leurs derniers chiffres "00". Les classes résiduelles de divisions complètent toujours les valeurs de 1962, 1961 ou 1960 de celles-ci. On est d'avis, qu'une comparaison qualitative "a" peut toujours être établie entre les totaux des divisions pour 1962, 1961 et 1960.

558 - 1962, 1961 and 1960 values for classes 912-04 and 912-08 are included with class 912-19.

559 - 1962, 1961 and 1960 values for class 915-13 are included with class 915-39.

560 - 1962, 1961 and 1960 values for class 915-64 are included with class 915-69.

561 - The allocation of 1962, 1961 and 1960 class 4187 is based on two test months and the analysis of unpublished records.

562 - 1962, 1961 and 1960 values for classes 918-13 and 918-39 are believed to be overstated by an estimated 70% and 50% respectively. Special surveys undertaken at the beginning of 1964 and enquiries sent indicate that a large proportion of motive picture and educational films entering the country and formerly coded in classes 9011 and 9148 were on a rental basis and should have been coded to former class 9990 in 1962, 1961 and 1960 and are properly coded to class 990-85 since January, 1964.

563 - 1962, 1961 and 1960 values for classes 919-39, 919-45, 919-49, 919-79 and 919-99 are included with division residual 910-00.

564 - 1961 and 1960 values for classes 921-40, 921-52 and 921-65 are included with class 921-99.

565 - The allocation of 1961 and 1960 class 9077 is based on two test months and the analysis of unpublished records.

566 - 1961 and 1960 values for classes 930-01, 930-06, 930-07, 930-12 and 930-16 are included with class 930-99.

558 - Les valeurs des classes 912-04 et 912-08 pour 1962, 1961 et 1960 sont incluses dans la classe 912-19.

559 - Les valeurs de la classe 915-13 pour 1962, 1961 et 1960 sont incluses dans la classe 915-39.

560 - Les valeurs de la classe 915-64 pour 1962, 1961 et 1960 sont incluses dans la classe 915-69.

561 - La répartition de la classe 4187 de 1962, 1961 et 1960 se fonde sur les deux mois de contrôle et sur l'analyse de renseignements non publiés.

562 - Les valeurs des classes 918-13 et 918-39 pour 1962, 1961 et 1960 semblent surévaluées dans une proportion d'environ 70% et 50% respectivement. Certaines études spéciales faites au début de l'année 1964 ainsi que des enquêtes menées auprès des importateurs révèlent que la majorité des films cinématographiques et des films éducatifs qui arrivaient au pays et étaient codifiés sous les anciennes classes 9011 et 9148 étaient simplement sous location et auraient dû être codifiés sous la classe 9990 en 1962, 1961 et 1960, mais sont maintenant correctement codifiés sous la classe 990-85 depuis janvier 1964.

563 - Les valeurs des classes 919-39, 919-45, 919-49, 919-79 et 919-99 pour 1962, 1961 et 1960 sont incluses dans la classe résiduelle de division 910-00.

564 - Les valeurs des classes 921-40, 921-52 et 921-65 pour 1961 et 1960 sont incluses dans la classe 921-99.

565 - La répartition de la classe 9077 de 1961 et 1960 se fonde sur les deux mois de contrôle et sur l'analyse de renseignements non publiés.

566 - Les valeurs des classes 930-01, 930-06, 930-07, 930-12 et 930-16 pour 1961 et 1960 sont incluses dans la classe 930-99.

589 - 1962, 1961 and 1960 values for class 970-99 are made up of imports classified on end use basis in 1962, 1961 and 1960 (chiefly articles ex. warehoused for ships' stores) and which could not be converted accurately to a commodity class. The goods formerly included in these classes were classified by commodity beginning with 1964 statistics.

590 - A new concept introduced in the treatment of gold in January, 1964, resulted in a change in the classification of quantities and values of gold. For comparison purposes 1964 values for classes 990-05 and 990-25 should be added to compare with 1962, 1961 and 1960 values for classes 9905 and 9925 combined.

577 - Les valeurs des classes 961-18 et 961-25 de 1962, 1961 et 1960 sont incluses dans la classe 961-29.

578 - La répartition de la classe 1720 de 1962, 1961 et 1960 se fonde sur les deux mois de contrôle et sur l'analyse de renseignements non publiés.

579 - La répartition de la classe 4157 de 1962, 1961 et 1960 se fonde sur les deux mois de contrôle et sur l'analyse de renseignements non publiés.

580 - La répartition de la classe 4252 de 1962, 1961 et 1960 se fonde sur les deux mois de contrôle et sur l'analyse de renseignements non publiés.

581 - La répartition de la classe 3460 de 1962, 1961 et 1960 se fonde sur les deux mois de contrôle et sur l'analyse de renseignements non publiés.

582 - La répartition de la classe 3180 de 1962, 1961 et 1960 se fonde sur les deux mois de contrôle et sur l'analyse de renseignements non publiés.

583 - La répartition des classes 3097, 3345 et 3392 de 1962, 1961 et 1960 se fonde sur les deux mois de contrôle et sur l'analyse de renseignements non publiés.

584 - Les valeurs de la classe 961-68 pour 1962, 1961 et 1960 sont incluses dans la classe 961-69.

585 - La répartition des classes 5714 et 6052 de 1962, 1961 et 1960 se fonde sur les deux mois de contrôle et sur l'analyse de renseignements non publiés.

586 - Les valeurs de la classe 961-74 pour 1962, 1961 et 1960 sont incluses dans la classe 961-79.

587 - La répartition de la classe 7114 de 1962, 1961 et 1960 se fonde sur les deux mois de contrôle et sur l'analyse de renseignements non publiés.

588 - La répartition de la classe 8450 de 1962, des classes 8700, 8720 et 8950 de 1961 et 1960 se fonde sur les deux mois de contrôle et sur l'analyse de renseignements non publiés.

589 - Les valeurs de la classe 970-99 pour 1962, 1961 et 1960 comprennent les articles d'importation codifiés d'après leur usage final en 1962, 1961 et 1960 (surtout les articles allant de l'entrepôt des douanes aux navires) et qui ne pouvaient pas être attribués avec précision à une classe de marchandises. Depuis 1964, les marchandises autrefois comprises dans ces classes sont codifiées par denrée.

590 - A compter de janvier 1964, on a donné une interprétation nouvelle à l'or brut et à l'or affiné, ce qui a eu pour résultat d'apporter un changement dans la classification des quantités et des valeurs de l'or. Pour fins de comparaison, on doit additionner les valeurs des classes 990-05 et 990-25 pour 1964 et les classes 9905 et 9925 de 1962, 1961 et 1960 avant d'établir des comparaisons valables.
